报告题目：Uniqueness of Meromorphic Functions and Meromorphic Functions Solutions of Some Special Functional Equations

报告人：李玉华教授（云南师范大学）

时间：2017-10-25 星期三 10:00-11:00

地点：光华东主楼 1501

摘要：The applications of Nevanlinna theory (i.e., Meromorphic functions Value distribution theory) are very extensive. In this talk, at first, we give a short survey of some results which related to some problems on uniqueness of meromorphic functions and the meromorphic functions solutions of some specific functional equations. Secondly, we introduce some open problems concerning uniqueness of meromorphic functions and meromorphic functions solutions of some special functional equations.
