

复旦大学数学科学学院 数学综合报告会

报告题目：**An introduction to Approximate Bayesian Computation**

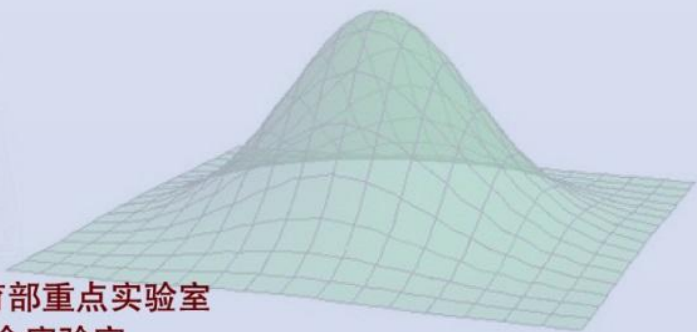

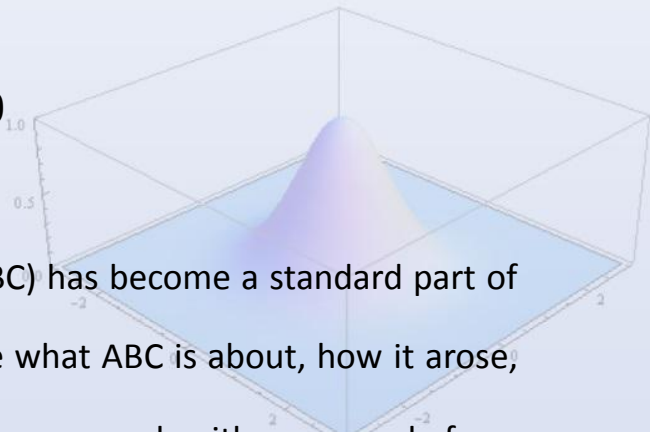

报告人：Professor Simon Tavaré

(Cancer Research UK Cambridge Institute & DAMTP, University of Cambridge)

报告时间：2015-11-17 星期二 10:30

报告地点：光华东主楼 2001

摘要：Approximate Bayesian Computation (ABC) has become a standard part of the statistician's toolbox. In this talk I will outline what ABC is about, how it arose, and what it can (and cannot) do. I will illustrate the approach with an example from cancer biology. No previous knowledge of cancer biology is needed to understand the talk.
